Yemen - Sector Wide Approach

in the Water Sector Aug 15

2022 This report reviews the economically vital and under-funded water sector in Yemen in alignment with the national water strategy and in harmonization with Yemen's development partners to provide support to water strategy implementation. The results indicate that at the level of the water sector, there is willingness and desire to move to a sector wide

approach. Yemen National Water Sector Strategy and Investment Program was an integrated and shared strategy and could serve as a platform for common and integrated approaches to sector investment. Therefore, the Government of Yemen and donors agreed to explore the possibilitiesector wide approach investment strategy and the Bank was asked to help assess the potential relevance and scope. Many of the broad framework conditions are there, although preparation work is needed and there are some impediments to alignment that will need to be tackled. Amongst the subsectors, rural water should be a priority because it is poised to move ahead with a restructuring that will repair its current fragmented state. The report concludes that the potential benefits of moving into a sector wide approach framework ensures stronger country ownership, strengthen national capacity systems and institutions, and more effective implementation with no

duplication and no wasted resources.

Model-based planning for post-conflict reconstruction:

The case of Yemen Dec 07

2021 Evidence-based planning for post-conflict reconstruction is often constrained by missing data and the shortcomings of conventional analytical methods. To overcome these constraints, we use economy-wide modeling methods to model the impact of war and reconstruction possibilities for the economy of Yemen. We first calibrate the model to pre-conflict data (2014) and validate it by replicating the most recent available dynamic needs assessments for Yemen that were elaborated by the World Bank. We then report model scenario results for unobserved development indicators, such as estimates for sector-level growth, employment, and poverty. For the post-conflict period, we use the assumptions of a recent dynamic needs assessment and assume gradual reconstruction

of the war-induced damages by the target year 2024. Then we focus on uncertain institutional factors and investigate their importance for the country's socio-economic development. Finally, we assess the potential structural characteristics of Yemen's economy in the year 2024 and analyze potential risks and trade-offs associated with government's institutional performance and the implications these have for the pace of post-conflict reconstruction.

Yemen Arab Republic Urban Sector Report Oct 13 2019

The Republic of Yemen - Economic Growth Mar 30 2021

High and sustained rate of economic growth in Yemen is a necessary, though not sufficient, condition for reduction of the high incidence of poverty and for raising the living standards of Yemeni citizens. Evidence in this report suggests that the main obstacle to rapid and sustained economic growth is the weak governance that characterizes Yemen in

addition to the weaknesses in domestic security, property rights, and rule of law systems. Weak governance in Yemen is characterized/manifested by widespread corruption, lack of transparency and accountability, inefficiency in the interaction of public officials and private business, ineffective or absent market promoting institutions such as those enforcing contracts (courts, tribunals, etc.), poor performance of the public sector in terms of delivering essential goods and implementing programs, associated lack of incentives and skills in the civil service, and weak enforceability of contracts and rulings. Along with ordering the governance situation, there are areas that should receive government priority in the short and medium term, including: 1) enhancing domestic security to boost economic activity in all economic sectors; 2) removing excessive and arbitrary regulations to strengthen basic infrastructure and other services and to attract private

investment into these sectors; 3) legal and judicial reform; and 4) sustained implementation of civil service reforms.

Yemen: Economy-wide impact of conflict and alternative scenarios for recovery Oct 17 2022 In addition to the unprecedented humanitarian crisis and the creation of space for militant groups, the conflict in Yemen is also taking a heavy toll on the economy. According to estimates from the International Monetary Fund (IMF 2018), the Yemeni economy may have contracted by about 40 percent between end-2014 and 2018. Sector-specific information on physical damages from the World Bank's Yemen Dynamic Needs Assessment (World Bank 2018) suggests that damage was worst in the housing sector, where 33 percent of housing units have been either partially damaged or completely destroyed. The education, health, transport, and water, sanitation and hygiene (WASH) sectors have also been severely affected, with overall damage

ranging from 27 percent (transport) to 31 percent (WASH). The power and ICT sectors have been somewhat less affected, with estimated damage levels of 13 percent and 11 percent, respectively.
Yemen Arab Republic Jan 16 2020

The Republic of Yemen Aug 03 2021 In the 20th century, Yemen was the first Arab state to gain independence. It has the only permanently elected parliament in the Arab world. Yet it is a country known more for its tribal kidnappings than for democracy. This book sets out clearly the history of Yemen's development, analysing the social, economic and environmental changes facing the country in the 21st century. Its author, Marta Colburn, has lived and worked in Yemen for many years. This book is a genuine treasure, full of facts and figures and illustrated throughout. It is a must for anyone wanting to gain a comprehensive insight into the complex situation of Yemen today.

Yemen Mineral & Mining Sector Investment and Business Guide - Strategic and Practical Information

The Economic Development of the Yemen Arab Republic (RLE Economy of Middle East) Sep 16 2022

The recent economic development of the Yemen Arab Republic is in stark contrast to the centuries of isolation that had marked the country prior to the 1962 Revolution. When economic planning was instituted in the 1970s, the nation was confronted by the needs of reconstruction after years of conflict, and of development. A formidable task was faced in the need to establish basic infrastructure throughout a country with a widely dispersed population and with extremely rugged terrain. In addition, the economy has been characterized by the high percentage of the workforce attracted overseas as migrant workers. This book provides the first comprehensive study

of the economic development of this under-studied nation.

First published in 1986.

Summary of the First Five-Year Plan of the Yemen Arab Republic Mar 10 2022

Building a New Yemen Sep 23 2020 Yemen has faced continuing crises since 2010. The fighting and divisions have destroyed much of Yemen's physical, political and social infrastructure, undermining its tribal traditions and religious tolerance, and impoverishing the country. The outbreak of war in 2015 caused the world's worst humanitarian crisis. In this book, Yemeni and international experts assess what political arrangements are required to overcome fragmentation and discord in Yemen. They look to understand how people from all parts of the county can work together to build a new Yemen, one that will give a voice to its young population and provide a full role for women. The contributors argue that Yemen's major resource is its population, but that Yemenis need to be motivated and

trained to give them the skills to rebuild the economy and to prepare for long-term challenges such as water shortages and climate change. The volume also discusses how the international community will need to absorb the lessons of the past to find better ways of creating the institutions, mechanisms and transparency with Yemenis that will enable the flow of vital assistance to where it is most needed. The book provides an up-to-date analysis to help governments and international agencies who will have to work with Yemen and its neighbours in the post conflict situation.

Impact of COVID-19 on the Yemeni economy: How the drop in remittances affected economic sectors, food systems, and households

Nov 18 2022 There has been an unprecedented decline in the flow of remittances to Yemen - a vital source of money for millions - as a result of the COVID-19 pandemic. A Social Accounting Matrix (SAM) multiplier model of Yemen's economy was used to

estimate the impact of lower remittances on economic sectors and employment, food systems, and household incomes.

Yemen - Road Sector Strategy
May 20 2020

Yemen Bringing Back Business Project May 12 2022 Escalating in March 2015, the conflict spanning across Yemen has resulted in massive casualties, a wave of internally displaced persons, substantial infrastructure damage, and hampered service delivery across both the economy and society. The business climate across Yemen has dramatically deteriorated as a result of the conflict, and businesses throughout the country experienced severe disruptions that for many firms constituted a force majeure situation, hindering their ability to either operate effectively or plan ahead for the future. Addressing these challenges requires substantial effort by the GoY and the international community to support the resilience of the private sector and prevent its

further deterioration and losses. The loss of private sector wealth and activity of this magnitude is part and parcel to the food insecurity, poverty, public health issues, and defunct service provision that plagues the war-fatigued population. As such, both in the future post-conflict setting and at present, engaging and revitalizing the Yemeni private sector is a crucial and indispensable step towards the successful reconstruction and recovery of Yemen, and the long-term well-being of the population.

The Security Sector in Yemen Sep 04 2021

Republic of Yemen Feb 15 2020

Why Yemen Matters Oct 25 2020 In November 2011, an agreement brokered by the GCC brought an end to Yemen's tumultuous uprising. The National Dialogue Conference has opened a window of opportunity for change, bringing Yemen's main political forces together with groups that were politically marginalized. Yet, the risk of

collapse is serious, and if Yemen is to remain a viable state, it must address numerous political, social and economic challenges. In this invaluable volume, experts with extensive Yemen experience provide innovative analysis of the country's major crises: centralized governance, the role of the military, ethnic conflict, separatism, Islamism, foreign intervention, water scarcity and economic development. This is essential reading for academi, journalists, development workers, diplomats, politicians and students alike. 'Essential reading ... The authors shed light on the context of the Yemeni uprising in a way that not only helps us understand the current transitional period but also the outlines of Yemen's future.' Charles Schmitz, President of the American Institute of Yemeni Studies 'An up to date and wide-ranging guide to what is arguably the Arab world's least known and most misunderstood state. Edited by one of Britain's foremost authorities on Yemen

... brings together an impressive range of experts on the country to examine the contemporary reality of Yemen.' Michael Willis, Director of the Middle East Centre, St Antony's College, Oxford University 'Thoughtful and well-researched, Why Yemen Matters unearths a wealth of information about contemporary Yemeni society.' Baghat Korany, Professor of International Relations, American University in Cairo [Yemen : Marine Sector and Human Resources Development](#) Nov 13 2019 **Stimulating Business and Employment in Yemen** Apr 30 2021 **Yemen** Dec 19 2022 Yemen is important to world trade and economy due to its strategic location at the Bab el-Mandab strait linking the Red Sea and the Gulf of Aden, as well as its oil and natural gas resources. However, poverty is one of the major constraints that prevent the country from participating as actively it should be. As such, the authors aim to illustrate the vicious circle of

poverty and make some recommendations that could play a role in breaking the cycle of poverty by equity and efficiency of the Islamic inspiration. Next, the authors review the interplay between health care challenges and the remnants of the weakened health care system in Yemen. Additionally, a critically analysis is performed on the challenges posed by the health care crisis and its implication on the future of Yemens healthcare system, as well as the different social classes of its population. The following chapter provides an overview of the banking sector and its progress since the issuance of economic and financial reforms post-1994 and the introduction and establishment of the Islamic Banks Act in 1996. The key challenges facing the banking industry in Yemen are highlighted, and recommendations for enhancing the industry and achieving the desired reforms of the financial system to strengthen the Yemeni economy are included. The

concluding chapter presents a case study which has been conducted in the Kuhlan Affar/Wadi Sharis area in Hajja Governorate. The study's methodology was largely based on a combination of data collected during the field surveys, data compiled from various other sources, correlation analysis with field observations, as well as the consultants' professional experience. However, because of data limitations, the findings presented in this case study should be considered preliminary and they remain subject to further refinement as more data become available.

A Study of the Industrial Sector of Yemen Arab Republic Apr 11 2022

Rebuilding Yemen Jul 02 2021

As Yemenis start planning the reconstruction and rebuilding of their country after recent turmoil they face huge challenges in every major sphere. This book discusses the political and economic background and analyses the

most important issues: the option of improved governance through a federal government addressing the powerful and patronage networks of the previous regime investing in Yemen's human and natural resources to compensate for falling revenues from oil and gas maintaining rural life through reduced dependence on irrigated agriculture and investing in enhancing rain fed agriculture addressing the issue of urban water shortage through desalination involving women in enhancing security

Private Sector Readiness to Contribute to

Reconstruction and

Recovery in Yemen

Jan 20 2023 Since 2011, Yemen has suffered a series of crises resulting in the ongoing war which began in March 2015 and which has had major economic consequences. Trade has been badly affected by the war. The Yemeni financial sector faces problems of liquidity, solvency and foreign exchange access. The construction sector is historically an important sector

in Yemen and should play a major role in recovery. The Government of Yemen and donors should take immediate steps to support the private sector. The year 2011 represented a series of political, social, and economic crises, culminating in the war that started in March 2015, which continue to reverberate throughout Yemen today. Effective reconstruction and recovery demands an understanding of the socio-economic drivers of resilience and recovery in Yemen, including the private sector. The private sector, including micro, small, and medium enterprises (MSMEs) that are prevalent in Yemen, is a major source of employment and provider of basic goods and services, making it an important part of socio-economic resilience and recovery. The capacity of trade, financial, construction, and agricultural sectors will be of particular importance for recovery and reconstruction. This note will discuss both conflict related and key

systemic constraints on the private sector and priorities for supporting resilience and recovery. It will focus on the private enterprise in sectors that are key to resilience and recovery: trade, construction, finance, and agriculture. It will present immediate and short-term investment and policy recommendations to support the recovery and stabilization needs of private sector operations during and following the end of the conflict.

Yemen Arab Republic, Development of a Traditional Economy Oct 05 2021

Decentralization on the Example of the Yemeni Water Sector Mar 18 2020
Decentralization is widely discussed in the literature. Katharina Mewes gives an introduction to the theoretical and practical dimensions of decentralization in an accessible and systematic way. On the example of the reform process for the Yemeni Urban Water Supply and Sanitation (UWSS) sector, she links the

theoretical, conceptual, and methodological aspects of decentralization to empirical problems. This book is valuable reading for researchers and students of political science, environmental and water studies, development researchers and regional experts.

Economy, Society & Culture in Contemporary Yemen Jun 20 2020

Domestic Government Jul 22 2020
Domestic Government explores the notion of 'household' as the site and organizing model not only of production but also of politics in Yemen's past and present. Its innovative vision of a household-based society challenges segmentary interpretations of traditional Arab rural societies and cuts across some of the key thematic divisions of Middle East studies such as 'the harem' and 'Islam'. Based on three years' fieldwork in a village of North Yemen, the study is written from the vantage point of women's society but, insisting that domestic government is not the

same as women's private domain, it is not confined to a study of women. Mundy instead links the idea and organization of the household with property and suggests subtle ways in which household and house relate to locality, region and wider notions of government and legal authority. Her combination of intimate ethnographic portraits and analytical techniques of family history is supported by a critical review of both Western and Arab trends of scholarship on the family and traditional society in the Middle East and serves to place the study of Arab society within the mainstream of anthropology and social history.

Gas Utilization and Privatization of the Power Sector in Yemen Jun 13 2022

Yemen's Water Sector Reform Program Aug 23 2020

This paper presents the findings of a Poverty and Social Impact Analysis (PSIA) of Yemen's water sector reform program. PSIA is the analysis of the distributional impacts of policy reforms on the well-

being or welfare of different stakeholder groups, with a particular focus on the poor and vulnerable. PSIA also examines vested interests to assess issues of sustainability and risk in policy reform. Among other analyses, the study builds on the Yemen Country Water Resource Assistance Strategy (CWRAS, World Bank 2005a) and the Country Social Analysis (CSA, World Bank 2006a). The CWRAS had identified the political economy as main constraint to water sector reform. The CSA assessed livelihoods and power relations in Yemeni society, and called specifically for a poverty and social impact analysis in the water sector. The PSIA recommendations, which address the above key messages, will be implemented through the NWSSIP Update and operations.

Yemen Arab Republic Jun 01 2021

Yemen - Mineral Sector Review Jan 28 2021

Dependence on the oil sector as a source of economic growth

is no longer sustainable given the rate at which oil reserves are being depleted. Yemen will come to rely on other sectors of the economy, some of which have potential but remain under-developed. The mineral sector is one of these. The third five year plan for development and poverty alleviation 2006-2010, identified the mineral sector as one of the key sources of future growth for the country, along with tourism and agriculture. This study was conducted to assess the potential contribution of the mineral sector to sustainable growth and poverty alleviation in Yemen and to define the constraints that will need to be overcome if this potential is to be realized. In so doing it helps to define those areas of government action and donor support that will need to be sustained over the medium to long term.

Republic of Yemen Jan 08 2022
Yemen, Republic of - Road Sector Feb 21 2023 The Republic of Yemen has experienced steady development in the recent past

and its Gross Domestic Product (GDP) per capita is approaching US\$1,000. By many aspects, Yemen is unique. It is still a rural country (with more than 70 percent of the population living in the countryside). It has about 140,000 villages and small settlements spread out all over the territory, many of which still need road access and harbor most of the country's poor (40 percent of the total population). Given the uneven distribution of population, transport demand varies enormously between different parts of the country. It is highest by far in the densely populated mountainous northwest part of the country and generally very small in the vast low density eastern part. Transport is essential to ensure that the rural areas participate in the main stream of economic and social life. Transport is also essential for trade, which is a key to the future of the economy. This is reinforced by the fact that most of the population is located away from the coastal areas,

including the capital city, Sana'a, in some of the most difficult terrain one could find in any country of the world. This report comprises three main parts: (i) a broad assessment of the situation of the Yemeni road sector and a comparison with countries similar to Yemen; (ii) an analysis of the sector's main issues; and (iii) an agenda for reform.
