This book grew out of a Dagstuhl seminar organized by the volume editors in June 1997. After the seminar, submissions for this book were solicited both from and beyond the group of participants. A peer review process followed, from which only original papers of the highest quality on the state of the art in the field were accepted for presentation in the book. The volume is divided into parts on temporal database infrastructure, temporal query languages, and advanced applications. A comprehensive bibliography, glossaries for both temporal database and time granularity concepts, and summaries of current work are also provided. The book is the ultimate reference for anyone actively involved in temporal database research and design or who is interested in their applications. Traditionally understood as an ancient teaching method conceived by the philosopher Socrates, scholars in education have boldly explored the definitions, philosophical underpinnings, assumptions, and uses of Socratic dialogue in various learning situations and educational settings. Despite its ancient origins, the Socratic Method has an impact on contemporary leadership, critical thinking skills, e-learning, adult education, and social-emotional learning. *Enhancing Teaching and Learning With Socratic Educational Strategies: Emerging Research and Opportunities* presents scholarly work, philosophical investigations, educational claims, and the latest empirical research on the process and outcome of the Socratic Method in educational contexts. It delves deeply into the instructional strategy uncovering its practical impact in educational contexts and its philosophical and societal consequences in the modern world. Covering topics such as female voice, maieutic instruction, and teacher preparation, this book is an essential resource for philosophers, educational administration, educators, researchers, pre-service teachers, academicians, and government programs. *Capturing Children's Meanings in Early Childhood Research and Practice* draws together contemporary research and established theories to produce a unique take on the meanings children express through a range of creative tools. Drawing on Reggio Emilia and the Mosaic approach, this book provides readers with a range of strategies for accessing, recording and interpreting young children's perceptions of and responses to their experiences. Providing a synthesis of the multiple imaginative ways we can capture young children's meanings through observations, art, photo elicitation, mindfulness, music and other creative methods, Halpenny covers topics such as: Negotiating challenges presented by researching with children Frameworks for seeing and hearing children's intentions Accurately documenting and interpreting research findings Promoting children's meanings and their performance of them Moving forward with new understandings This book is an indispensable resource for students of early childhood education, especially for courses focusing on the lived experiences of children from early to middle childhood. It is also a useful reference for those working with young children in educational and caregiving settings, and for those advocating for young children. This excellent resource provides an approach to research and evaluation that helps educators better understand and address the needs of students with various disabilities. Health research and health care practice are radically transforming as governments invest more in large scale, national and international health projects with increasing levels of interdisciplinarity as populations age and as nations grow wealthier. This volume examines the structures and dynamics of scientific collaboration in health research and health care. Bringing together detailed research from the US, Canada, Europe and Japan, *Collaboration Across Health Research and Medical Care* sheds light on the features, environments and relationships that characterise collaboration in health care and research, exploring changing patterns of collaboration and examining the causes and consequences of team work in the health domain. With attention to the increasingly porous boundaries between health care and research, the book not only investigates research settings, but also considers the manner in which knowledge produced in laboratories and clinics is translated into day-to-day medical and care practice and health initiatives. It offers a rich examination of the political, technical and organisational facets of collaboration and the implications of changes in collaboration for every day treatment and practice, *Collaboration Across Health Research and Medical Care* will be of interest to scholars of sociology and science and technology studies, as well as those working in the field of health policy and research. "Bringing together scholarship and pedagogy from a multiple of perspectives and disciplines to provide a broader and more complex understanding of information literacy and suggests ways that teaching and library faculty can work together to respond to the rapidly changing and dynamic information landscape"--Provided by publisher. The most complete record of a contemporary American dramatist available, *David Mamet: A Resource and Production Sourcebook* is the result of ten years' research by a widely published drama and theatre scholar and a university bibliographic specialist. Presenting a complete overview of all reviews and scholarship on Mamet, the authors challenge assumptions about the playwright, such as the charge that he is an antifeminist writer. This comprehensive sourcebook is an essential purchase for Mamet scholars and students of American drama alike. *David Mamet: A Resource and Production Sourcebook* reflects the revolution underway in the study of drama, in which not only previous scholarship but performance reviews are a necessary part of research. It gives a complete listing and overview of over 250 scholarly articles and chapters of books on Mamet's plays. It also presents the complete production history of each play, including review excerpts. The authors have produced an invaluable guide to research into this key contemporary dramatist. *The Politics of Energy Research and Development* examines and evaluates U.S. research and development policies to promote nuclear, solar, conservation, and other technology options. This volume is the third in the series *Energy Policy Studies*, which explores fundamental, long-term social, political, and economic dimensions of energy technology, resources, and use. Contributions represent a wide range of theoretical and policy perspectives, including sociology, economics, political science, urban and regional studies, environmental analysis, and history and philosophy of technology. Contents: Richard L. Ottinger, "Introduction: The Tragedy of U.S. Energy R&D Policy"; Amor^ B. Lovins, "The Origins of the Nuclear Power Fiasco"; Richard T. Sylves, "Nuclear Exotica: Peaceful Use of Nuclear Explosives"; Eugene Frankel, "Technology, Politics and Ideology: The Vicissitudes of Federal Solar Energy Policy, 1974-1983"; Maxine Savitz, "The Federal Role in Conservation Research and

Development"; J. David Roessner, "Commercialization Issues in Energy Technology Policy"; John Byrne and Daniel Rich, "In Search of the Abundant Energy Machine"; and Grant P. Thompson, "Energy Policy in the Interim: Waiting for the Next Shoe to Drop." During the last four decades, a corpus-based approach to language teaching has become very significant. Direct use of corpora in language pedagogy is limited by certain factors: time, the lecturer's knowledge and skills needed to analyze the corpus, access to sources such as computers and appropriate computer tools, or a combination of these factors. The key to a successful corpus-based approach is in the appropriate level of the lecturer's guidance or pedagogical mediation, which depends on student age, experience, and prior knowledge. It is therefore very important that lecturers be equipped with the necessary knowledge and education for using and analyzing corpora on a daily basis. Computer Corpora and Open Source Software for Language Learning: Emerging Research and Opportunities is a cutting-edge research publication that analyzes teacher experiences in implementing computer corpora into their language learning classrooms in order to formulate additional insights as to best strategies for integrating such tools that maximizes language learning efficiency in primary and secondary education. Highlighting topics such as ICT tools, language education, and linguistics, this book is ideal for academicians, educators, computer science teachers, IT professionals, researchers, and students. In both rich and poor nations, public resources for health care are inadequate to meet demand. Policy makers and health care providers must determine how to provide the most effective health care to citizens using the limited resources that are available. This chapter describes current and future challenges in the delivery of health care, and outlines the role that operations research (OR) models can play in helping to solve those problems. The chapter concludes with an overview of this book – its intended audience, the areas covered, and a description of the subsequent chapters. KEY WORDS Health care delivery, Health care planning HEALTH CARE DELIVERY: PROBLEMS AND CHALLENGES 3 1.1 WORLDWIDE HEALTH: THE PAST 50 YEARS Human health has improved significantly in the last 50 years. In 1950, global life expectancy was 46 years [1]. That figure rose to 61 years by 1980 and to 67 years by 1998 [2]. Much of these gains occurred in low- and middle-income countries, and were due in large part to improved nutrition and sanitation, medical innovations, and improvements in public health infrastructure. Catalyst technologies account for over \$1 trillion of revenue in the U.S. economy alone. The applications range from medicines and alternative energy fuel cell technologies to the development of new and innovative clothing fibers. In this book, a World Technology Evaluation Center (WTEC) panel of eight experts in the field assesses the current state of research and development in catalysis by nanostructured materials, its sources of funding, and discusses the state of the field with respect to productivity and leadership in various nations around the world. In addition to showing the numerous and highly advantageous practical applications of the field, the panel concludes that Western Europe is currently the most productive region, followed closely by the United States. Still, the research and development output of the People's Republic of China has recently surpassed that of Japan and is now poised to surpass that of the U.S. as well. As such, this assessment is a timely review of the field's progress, taking into account the increasing contributions from Asia, and will be essential reading for professionals, whether they are seeking an in-depth summary of the state of the art or a broad view of trends affecting the discipline. FOUNDATIONS OF LEGAL RESEARCH AND WRITING, Fifth Edition is the ideal resource for paralegals. This book project poses a major challenge to Japanese science education researchers in order to disseminate research findings on and to work towards maintaining the strength and nature of Japanese science education. It also presents a unique opportunity to initiate change and/or develop science education research in Japan. It provides some historical reasons essential to Japanese students' success in international science tests such as TIMSS and PISA. Also, it helps to tap the potential of younger generation of science education researchers by introducing them to methods and designs in the research practice. Autoimmune diseases are characterized by an abnormal and self-directed immune response leading to damage and dysfunction of multiple organs and tissues. Most autoimmune diseases are recognized as affecting disproportionately more women than men, suggesting a crucial role of sex hormones in modulating immune responses, with estrogens being postulated as enhancing autoimmunity and androgens playing a protective role. It is also widely acknowledged that there is an overwhelming male bias in non-human (animal) studies of autoimmune diseases, while studies of both sexes in human research frequently fail to analyze results by sex. Underrepresentation of females in animal models of autoimmune disease is often justified by their intrinsic variability during the reproductive period, compromising the understanding of impact of the female sex chromosome and hormones on immune system functions leading to the high prevalence of autoimmune conditions. This Research Topic will highlight the most recent advances in understanding the possible mechanisms for sex-specific differences in autoimmunity, with a specific focus on pre-clinical animal and human models of autoimmune inflammation, as well as on the most common sex specific differences in autoimmune diseases. The topic will emphasize advances in research exploring sex determinants in autoimmune rheumatic diseases such as systemic lupus erythematosus, rheumatoid arthritis, spondyloarthritis, psoriatic arthritis, Sjögren's syndrome and further diseases such as inflammatory bowel disease, autoimmune hepatitis, multiple sclerosis, psoriasis, asthma and more. The present Research Topic will include both full length and short research communications, as well as perspective and review articles addressing various aspects of sex biased differences in pathogenesis, age at disease onset, clinical manifestations, disease course, treatment response, associated co-morbidities and overall survival across different autoimmune diseases.
